LAB REPORT
on

Artificial Intelligence

Submitted by

ROSHNI R (1BM21CS275)

in partial fulfillment for the award of the degree of
BACHELOR OF ENGINEERING
in
COMPUTER SCIENCE AND ENGINEERING

B.M.S. COLLEGE OF ENGINEERING
(Autonomous Institution under VTU)
BENGALURU-560019
Nov-2023 to Feb-2024

B. M. S. College of Engineering,

Bull Temple Road, Bangalore 560019

(Affiliated To Visvesvaraya Technological University, Belgaum)

Department of Computer Science and Engineering

CERTIFICATE

This is to certify that the Lab work entitled "**Artificial Intelligence**" carried out by **ROSHNI R (1BM21CS275),** who is bonafide student of **B.M.S. College of Engineering.** It is in partial fulfillment for the award of **Bachelor of Engineering in Computer Science and Engineering** of the Visvesvaraya Technological University, Belgaum during the academic semester Nov-2023 to Feb-2024. The Lab report has been approved as it satisfies the academic requirements in respect of a **Artificial Intelligence (22CS5PCAIN)** work prescribed for the said degree.

Prof. Swathi Sridharan

Assistant Professor
Department of CSE
BMSCE, Bengaluru

Dr. Jyothi S Nayak

Professor and Head
Department of CSE
BMSCE, Bengaluru

Index Sheet

Course Outcome

CO1	Apply knowledge of agent architecture, searching and reasoning techniques for different applications.
CO2	Analyse Searching and Inferencing Techniques.
CO3	Design a reasoning system for a given requirement.
CO4	Conduct practical experiments for demonstrating agents, searching and inferencing.

1. Implement Tic –Tac –Toe Game.

Tic Tac Toe (Program-1)

The algorithm used is minmax algorithm
The minmax algorithm is a backtracking algorithm. A numerical value is attached to each possible end result. [0 r s]

```
function minimax(board, depth, ismaxplayer):
if current board state is a terminal state:
return value of the board
if ismax player:
bestVal = -INFINITY
 for each move in board:
     value = minimax(board, depth+1, false)
     bestval = max(bestVal, value);
   return bestVal
else:
best_val = +INFINITY
for each move in board:
   value = minimax(board, depth+1, true)
    bestVal = min(bestVal, value)
return bestVal

function ismovesleft(board):
for each cell in board:
   if current cell is empty:
      return true
return false
```

8/11/2022

```
if maximizer has won:
   return winscrore - depth
else if minimizer has won:
   return loosescore + depth
```

Date __/__/__

Page _____

The maximum depth is 9!

Assume there are two possible ways for X to win:

Move A: X can win in 2 moves

Move B: X can win in 4 moves

Move A is better because it ensures a faster victory. But AI may choose B sometimes. To overcome this problem we subtract the depth value from the evaluated score.

Move A will have a value of 10-2 = 8

Move B will have a value of 10-4 = 6

Since move A has a higher score compared to move B so AI will choose move A over move B.

2. Solve 8 puzzle problems.

```

```
Example 1
Rules:  Rv~P Rv~Q ~RvP ~RvQ
Goal:  R

Step    |Clause |Derivation
------------------------------
 1.     | Rv~P  | Given.
 2.     | Rv~Q  | Given.
 3.     | ~RvP  | Given.
 4.     | ~RvQ  | Given.
 5.     | ~R    | Negated conclusion.
 6.     |       | Resolved Rv~P and ~RvP to Rv~R, which is in turn null.
A contradiction is found when ~R is assumed as true. Hence, R is true.

Example 2
Rules:  PvQ ~PvR ~QvR
Goal:  R

Step    |Clause |Derivation
------------------------------
 1.     | PvQ   | Given.
 2.     | ~PvR  | Given.
 3.     | ~QvR  | Given.
 4.     | ~R    | Negated conclusion.
 5.     | QvR   | Resolved from PvQ and ~PvR.
 6.     | PvR   | Resolved from PvQ and ~QvR.
 7.     | ~P    | Resolved from ~PvR and ~R.
 8.     | ~Q    | Resolved from ~QvR and ~R.
 9.     | Q     | Resolved from ~R and QvR.
 10.    | P     | Resolved from ~R and PvR.
 11.    | R     | Resolved from QvR and ~Q.
 12.    |       | Resolved R and ~R to Rv~R, which is in turn null.
A contradiction is found when ~R is assumed as true. Hence, R is true.
```

```
Example 3
Rules:  PvQ PvR ~PvR RvS Rv~Q ~Sv~Q
Goal:  R

Step    |Clause |Derivation
-----------------------------
 1.     | PvQ   | Given.
 2.     | PvR   | Given.
 3.     | ~PvR  | Given.
 4.     | RvS   | Given.
 5.     | Rv~Q  | Given.
 6.     | ~Sv~Q | Given.
 7.     | ~R    | Negated conclusion.
 8.     | QvR   | Resolved from PvQ and ~PvR.
 9.     | Pv~S  | Resolved from PvQ and ~Sv~Q.
 10.    | P     | Resolved from PvR and ~R.
 11.    | ~P    | Resolved from ~PvR and ~R.
 12.    | Rv~S  | Resolved from ~PvR and Pv~S.
 13.    | R     | Resolved from ~PvR and P.
 14.    | S     | Resolved from RvS and ~R.
 15.    | ~Q    | Resolved from Rv~Q and ~R.
 16.    | Q     | Resolved from ~R and QvR.
 17.    | ~S    | Resolved from ~R and Rv~S.
 18.    |       | Resolved ~R and R to ~RvR, which is in turn null.
A contradiction is found when ~R is assumed as true. Hence, R is true.
```

Resolution

Prove R

P ∨ Q

P → R

Q → R

P → R ⇒ ¬P ∨ R

Q → R ⇒ ¬Q ∨ R

Step	Formula	Derivation
1	P ∨ Q	Given
2	¬P ∨ R	Given
3	¬Q ∨ R	Given
4	¬R	Negated conclusion
5	Q ∨ R	1, 2
6	¬P	2, 4
7	¬Q	3, 4
8	R	5, 7
9		4, 8

A contradiction is found when ¬R is assumed as true. Hence, R is true.

Code:

```
!pip install z3-solver
from z3 import Implies, Not, Bool, Solver, sat
p,q,r = Bool('p'), Bool('q'), Bool('r')
kb: Implies(p, q) & Implies(q, r) & Not (p)
query = r
def prove-query-with-resolution (knowledge-
                                 base, query):
```

```
s = Solver()
s.add(Not(knowledge_base), query)
result = s.check
return result == sat
proof_result = prove_query_with_
                resolution(kb, query)
if proof_result:
  print("The query is proved to be true.")
else:
  print("The query is not proved to be
                                  true.")
```

The query is proved to be true.

print(Skolemization(fol_to_cnf("animal(y)<=>loves(x,y)")))
print(Skolemization(fol_to_cnf("∀x[∀y[animal(y)=>loves(x,y)]]=>[∃z[loves(z,x)]]")))
print(fol_to_cnf("[american(x)&weapon(y)&sells(x,y,z)&hostile(z)]=>criminal(x)"))
```

OUTPUT:

```
Example 1
FOL: bird(x)=>~fly(x)
CNF:  ~bird(x)|~fly(x)

Example 2
FOL: ∃x[bird(x)=>~fly(x)]
CNF:  [~bird(A)|~fly(A)]

Example 3
FOL: animal(y)<=>loves(x,y)
CNF:  ~animal(y)<|loves(x,y)

Example 4
FOL: ∀x[∀y[animal(y)=>loves(x,y)]]=>[∃z[loves(z,x)]]
CNF:  ∀x~[∀y[~animal(y)|loves(x,y)]]|[[loves(A,x)]]

Example 5
FOL: [american(x)&weapon(y)&sells(x,y,z)&hostile(z)]=>criminal(x)
CNF:  ~[american(x)&weapon(y)&sells(x,y,z)&hostile(z)]|criminal(x)
```

FOL to CNF

Code:

```
def getAttributes(string):
    expr = '\([^)]+\)'
    matches = re.findall(expr, string)
    return [m for m in str(matches) if
                                m.isalpha()]

def getPredicates(string):
    expr = '[a-zA-Z~]+\([A-Za-z,]+\)'
    return re.findall(expr, string)

def DeMorgan(sentence):
    string = ''.join(list(sentence).copy())
    string = string.replace('~~', '')
    flag = '[' in string
    string = string.replace('~[', '')
    string = string.strip(']')
    for predicate in getPredicates(string):
        string = string.replace(predicate,
                                f'~{predicate}')
    s = list(string)
```

Steps:

1) Eliminate implications:

$a \rightarrow b = \sim a \vee b$

$\sim(a \wedge b) = \sim a \vee \sim b$ (De-Morgan's)

$\sim(a \vee b) = \sim a \wedge \sim b$

$\sim(\sim a) = a$

2) Eliminate Existential Quantifier '∃'

To eliminate f, replace the variable by skolem constant.

Ex: ∃y, President(y)

replace y

President(George Bush)

3) Eliminate universal quantifier, ∀

3) Eliminate universal quantifier ∀

Eliminate ∀, drop the pretix i.e just drop the ∀.

Ex:

a) ∀x: food(x) ⟹ likes(John, x)

b) food(Apple) ∧ food(vegetables)

1) Eliminate all implications

a) ∀x ¬food(x) ∨ likes(John, x)

b) food(Apple) ∧ food(Vegetables)

2) Move negation (¬) inwards

a) ∀x ¬food(x) ∨ likes(John, x)

b) food(Apple) ∧ food(Vegetables)

c)

3) Rename variable

Ex:

¬∀x p becomes ∃x ¬p

¬∃x p becomes ∀x ¬p.

Program 9:

```
def getAttributes(string):
    expr = '\([^]+\)'
    matches = re.findall(expr, string)
    return [m for m in str(matches) if
     m.isalpha()]

```

Create a knowledge base consisting of FOL statements and prove the given query using forward reasoning.

missile(x) ⇒ weapon(x)

missile(M1)

enemy(x, America) ⇒ hostile(x)

american(West)

enemy(Nono, America)

owns(Nono, M1)

missile(x) & owns(Nono, x) ⇒ sells(West, x, Nono)

american(x) & weapon(y) & sells(x, y, z) & hostile(z) ⇒ criminal(x)

Query:

criminal(x)

Missile(M1)

missile(M1) ⇒ Weapon(M1)

x / M1

enemy(Nono, America) ⇒ hostile(Nono)

x / Nono

hostile(Nono)

missile(M1) & owns(Nono, M1) ⇒ sells (West, M1, Nono)

x / M1

american(West) & weapon(M1) & sells (West, M1, Nono) & hostile(Nono) ⇒ criminal(West)

∴ Query proved

Program 10:
